

Optional Spark Plug Cable Protection for 69-220A (Blue Flame) and 119-103A (BFII Centrifugal Burner)

Pieces are provided which may be used to protect the spark plug end of the cable from rodent damage.

Press the elbow and 3" piece together. It is not necessary to glue them.

For Blue Flames:

The spark plug cable will come from the control box, through the burner housing, through the cylinder weldment, and go directly to the spark plug through the large hole. It will not go through the small hole, near the spark plug, like it did before.
